github上的ahk脚本(实时更新): https://github.com/ngp320/my-ahk-scripts < https://github.com/ngp320/my-ahk-scripts >

# 1 指定程序之间 的 快捷键切换,如果没打开则打开,如果打开了就切换到该程序。

非常好用,用起来很方便,用得最多的之一

```
2; #NoTrayIcon;不显示托盘图标
3 ; Function to run a program or activate an already running instance
4 RunOrActivateProgram(Program, WorkingDir="", WindowSize=""){
     SplitPath Program, ExeFile
     Process, Exist, %ExeFile%
7
     PID = %ErrorLevel%
8
     if (PID = 0) {
9
     Run, %Program%, %WorkingDir%, %WindowSize%
     }else{
11
      WinActivate, ahk pid %PID%
12
13 }
14 ;打开or切换谷歌浏览器 Alt+Z
16 RunOrActivateProgram("C:\Program Files (x86)\Google\Chrome\Application\chrome.exe")
17 return
18 ;打开or切换notepad++ Alt+X
20 RunOrActivateProgram("C:\Program Files\Notepad++\notepad++.exe")
21 return
22 ;打开or切换eclipse Alt+C
23 !c::
24 RunOrActivateProgram("D:\0Software\eclipse\eclipse.exe")
25 return
26 ;打开or切换Typora
27 ;之前只有Typora不灵,这种方式就可以诶 =。= 哇。。。知乎万岁
28 !v:: ;Alt+V
29 DetectHiddenWindows, On
30 SetTitleMatchMode, 2
31 WinGet, winid, ID, Typora
32 ;MsgBox,%winid%
33 SetTitleMatchMode, 1
34 If (winid) {
35 WinWait, ahk_id %winid%
36 WinShow
37 WinActivate
38 ControlFocus, EditComponent2, A
```

```
39 ControlSetText, EditComponent2,, A
40 }else{
41  ; RunOrActivateProgram("D:\Program Files\AliWangWang\AliIM.exe")
42  RunOrActivateProgram("C:\Program Files\Typora\Typora.exe")
43 }
44  DetectHiddenWindows, Off
45  return
```

# 2 notepad++快速打开文件(批量打开的话,选中文件夹再win+e)

### 一键拷贝文件路径

改成任何一种编辑器也行,修改这一段:

C:\Program Files\Notepad++\notepad++.exe

```
2 ;#NoTrayIcon ;不显示托盘图标
3 Explorer GetSelection(hwnd="")
                               ;函数
4 {
      WinGet, process, processName, % "ahk id" hwnd := hwnd? hwnd:WinExist("A")
      WinGetClass class, ahk_id %hwnd%
7
      if (process != "explorer.exe")
8
         return
      if (class ~= "Progman|WorkerW") {
             ControlGet, files, List, Selected Col1, SysListView321, ahk class %class%
10
11
             Loop, Parse, files, `n, `r
                ToReturn .= A Desktop "\" A LoopField "`n"
12
         } else if (class ~= "(Cabinet|Explore)WClass") {
             for window in ComObjCreate("Shell.Application").Windows
       {
         try{
17
                if (window.hwnd==hwnd)
                    sel := window.Document.SelectedItems
         }catch e {
           continue
21
         }
22
       }
             for item in sel
                ToReturn .= item.path "`n"
26
      return Trim(ToReturn,"`n")
27 }
28 ; [Win] + Z ; 一键拷贝文件路径 ;
29 #Z::
30 clipboard := % Explorer_GetSelection(hwnd) ;调用了 函数
31 Tooltip,%clipboard%;在鼠标右侧显示【拷贝的文件路径】
32 Sleep,800
33 Tooltip,
34 return
35 ;一键用notepad++[打开选中的文件]or[选中文件夹]的所有子文件
36;路径中有空格就会很糟糕 【解决策略:加双引号就好,win自身的Program files也是有空格的】
37 ; [Win] + E
38 #E::
```

```
39 path :=% Explorer_GetSelection(hwnd);调用了 函数
40 Software = C:\Program Files\Notepad++\notepad++.exe
41 Run, %Software% "%path%"
42 return
```

### 3 app-给potplayer发送Enter键

```
1 #NoTrayIcon ;不显示托盘图标
2 DetectHiddenWindows, On
3 SetTitleMatchMode, 2
4 SetCapsLockState, AlwaysOff;禁用CapsLock
5 Return
6 ;用一次CapsLock后,再用Alt+Tab切换
7 #IfWinExist ahk_exe PotPlayerMini64.exe
8;~表示不影响原有按键
9 ;$ 表示,在Send包含自身时,用$可以防止重复自调用死循环
10 ~CapsLock::
11 {
    PotPlayer_id := WinExist("ahk_exe PotPlayerMini64.exe")
12
                          ;获得当前窗口ID
    WinGet, acive id, ID, A
13
    ;msgBox, %PotPlayer id%
14
    ;msgBox, %acive_id%
     WinActivate,PotPlayer ;激活 PotPlayer_id
17
    ControlSend, ,{Space},ahk_id %PotPlayer_id%;发送按键到PotPlayer64
    WinActivate,ahk_id %acive_id% ;返回原来的窗口
18
20
21
     return
22 }
23 #IfWinExist
```

## 4 Ctrl + C / V 增强, 显示复制或者剪切的内容

## 5 每app-每日chrome书签备份

```
1 #NoTrayIcon ;不显示托盘图标
2 FormatTime, CurrentDateTime,, yyy-MM-dd_HH-mm-ss
3 FileCreateDir, F:\0Software\chrome_bookmarks_backup
4 FileCopy, C:\Users\ngp\AppData\Local\Google\Chrome\User Data\Default\Bookmarks, D:\00Software\chrome
```

5 return

#### 6 发送当前格式化时间

```
2 #NoTrayIcon ;不显示托盘图标
3;功能: 发送当前日期
4;简介: 利用剪贴板和正则匹配,在选中文本的行首加上注释符号
5;操作: 输入nnow+[一个空格]
6;原因: Hexo经常要输入格式化的日期
; 【? 号表示在单词中也会替换, e.g. Vnnow → V2019.....】
8 :?:nnow::
9 FormatTime, CurrentDateTime,, yyy/MM/dd HH:mm
10 Send %CurrentDateTime%
11 return
12 ::ppic::
13 FormatTime, CurrentDateTime,, yyy-MM-dd-
14 Send %CurrentDateTime%
15 tooltip, 2019-xx-xx-文章名 | 图片集名-图片序号 ;在鼠标右侧显示clipboard内容
              ;显示800ms
16 sleep,2000
17 tooltip,
18 return
```

### 7 pro-禁用Numlock

### 8 pro-禁用CapsLock LWin 慎重使用

### 9 搜狗输入法快捷切换中英文, (配合loop可以设置成每2分钟自动切换为英文输入法)

9; #Warn; Enable warnings to assist with detecting common errors.

```
1; #NoTrayIcon ;不显示托盘图标
2;功能: 输入法状态提示 ;f3强制中文 f4强制英文小写
3;环境: win10+搜狗输入法,输入法状态切换用默认的shift键。
4;作者: kazhafeizhale
5;时间: 2018年9月8日
6;参考来源 https://www.autoahk.com/archives/3278
7;如果安装有Snipaste,需要禁用f1以外的快捷键
8 #NoEnv; Recommended for performance and compatibility with future AutoHotkey releases.
```

```
10 SendMode Input; Recommended for new scripts due to its superior speed and reliability.
11 SetWorkingDir %A_ScriptDir%; Ensures a consistent starting directory.
12 #SingleInstance force
13 ;startuplnk := A_StartMenu . "\Programs\Startup\自动化集合.lnk"
14; Menu, Tray, Add, 开机启动, AutoStart
15 ; if(FileExist(startuplnk))
16; Menu, Tray, Check, 开机启动
17; return
18 ; AutoStart:
if(FileExist(startuplnk))
20 ; FileDelete, % startuplnk
21 ; else
     ; FileCreateShortcut, % A_ScriptFullpath, % startuplnk
22
     ; Menu, Tray, ToggleCheck, 开机启动
24; return
